Content of the “Basics of ManuScan Biometrics Level-1” workshop

Duration: 2 days

The training programme comprises such elements as instruction and written documentation (serving as training materials) related to the most important and critical functions of the iCOGNIZE ManuScan Biometrics Systems for all participants. A special focus is put on the following topics:

- Overview of system innovations – at the manufacturer's plant
- System setup and system design
- Instruction on the operation and functioning of the iCOGNIZE Plexus management system and the hand vein scanner
- Configuration interface / configuration commands
- Commentary on the configurations performed
- System analysis and troubleshooting as part of 1st-Level Support and identifying simple disruptions and errors
- Documentation

Prerequisites for participation:

- Fundamental knowledge of networks
 - Basic understanding of technology
 - Elementary knowledge of electrotechnics
 - Elementary knowledge of security technologies
 - Expertise in the field of access control Setup and functions of access control measures in areas with escape routes and other hindrances.
- Maximum number of participants: 4
